Barcelona, Spain

edgarcancinoe@exatec.tec.mx

Robotics and AI researcher with a **BSc in Robotics and Digital Systems Engineering** and an **MSc in Artificial Intelligence** from the Erasmus Mundus EMAI program. My recent research has focused on generative and multimodal models, including a thesis on vision-language-action (VLA) models for robot manipulation and a first-author paper on machine unlearning in identity-conditioned diffusion models, accepted at IEEE IJCB 2026.

Education

2024 – 2026 **MSc in Artificial Intelligence (Erasmus Mundus)**

Pompeu Fabra University – Sapienza University – University of Ljubljana

2021 – 2024 **BSc in Robotics and Digital Systems Engineering**

Tecnológico de Monterrey

GPA 96 /100

Research

2026 **PIU: Proximity-guided Identity Unlearning in ID-Conditioned Diffusion Models**

Computer Vision Laboratory, University of Ljubljana

Targeted removal of individual identities from ID-conditioned diffusion models while preserving generation utility on retained identities.

First author. Accepted at IEEE IJCB 2026.

2026 **Explicit Perceptual Guidance in Vision-Language-Action Models**, MSc Thesis

Visual Cognitive Systems Laboratory (ViCoS), University of Ljubljana

Recovered expert-aligned perceptual information from the intermediate representations of vision-language-action models, defined it as a *visual-thought* token sequence, and studied its use as conditioning signals during VLA fine-tuning for improving robotic control.

Experience

Feb. 2026 – **AI Engineer, R&D (Part-Time)**

Present *Anzures* — Remote

Designed the full generation pipeline for a virtual try-on product, turning diffusion models into a system with predictable, controllable output. Ran R&D across LoRA fine-tuning, prompt engineering, and quality evaluation.

Mar. 2022 – **Machine Learning Engineer (Part-Time)**

Jan. 2026 *Saveware* — Remote

[View](#)

Developed an attention-based model for trailer-loading duration prediction with uncertainty estimation, and designed automated data-processing and reporting tools for operational efficiency analysis.

Jan. 2024 – **Visiting Researcher – Kavraki Lab**

Feb. 2024 *Rice University* — Houston, USA

[View](#)

Integrated motion planning with Samsung's SceneGrasp model for multi-object 3D shape reconstruction and grasp pose estimation from RGB-D data on a UR5 robot.

Projects

2024 **Autonomous Localization and Navigation System for Differential Drive Robot**

Tecnológico de Monterrey

[View](#)

Developed a vision / LiDAR-powered autonomous vehicle for reactive navigation. Odometry fusion with Extended Kalman Filter for localization. Edge-deployed on NVIDIA Jetson.

2023 **Deep Reinforcement Learning for Trajectory Planning of a Robotic Arm**

Tecnológico de Monterrey

[View](#)

Implemented Deep Deterministic Policy Gradient (DDPG) and Hindsight Experience Replay (HER) to learn a policy for point-to-point motion and precise target positioning in joint space.

Technical Skills

AI/ML: PyTorch, Hugging Face, Diffusers, OpenCV, CUDA

Programming: Python, C, C++, MATLAB

Tools: Docker, Git, W&B, AWS, GCP

Robotics: ROS, SLAM, LiDAR

Embedded: FreeRTOS, MQTT, STM32

Languages: Spanish (native), English (C2), Italian (A2)
